

SUZOHAPP unleashes the power of its VisionPro line and new pricing strategy on Elo monitors

With a range of sizes, capabilities and designs – SUZOHAPP's LED-framed VisionPro monitors took centre stage alongside a vast portfolio of cutting-edge printers, scanners, buttons, cabinet parts and cash management solutions

Using top panel brands and high-quality boards, VisionPro is available in sizes between 6.2" to 90". The VisionPro's Thru-Glass capability allows touchscreens to work through 9mm of tempered glass and is supported by fast customisation available for both OEMs and upgrades, including specialised panels and integration, customised metal, touchscreens and inputs. Capable of resolutions up to 4K, standard and stretched panel formats, a choice of 10-touch Projected Capacitive (PCAP) and matching non-touch versions, the VisionPro is also economically priced.

"Besides our own VisionPro monitor line, we are also the leading distributor of top-quality Elo gaming monitors. Our increased bulk purchasing power and pricing strategy is allowing serious price reductions from what OEMs may have seen before on the well-established product range," explained Mike Sigona, SUZOHAPP's Global Gaming Product and Business Development Manager. "Customers can now more easily justify having Elo quality in their machines.

"Alongside over 150 gaming monitors, the new website offers comprehensive product information on all the complementary components from cash handling, printers and scanners, to locks in an intuitive and easy-to-navigate format. The site also has a renewed focus on the mass growth market of sport betting and a completely new product line of OTC lottery solutions."

Displayed alongside the VisionPro range was the new drop-in replacement E-PRL electronic reprogrammable lock which enables remote authorisation, traceability, and the benefit of never again needing to change locks when a key is lost or an employee dismissed. The Dynamic Panel Systems (DPS) features the latest

advancements in player interfaces, offering the adaptability of touch screens whilst maintaining the feel of mechanical pushbuttons to keep users engaged.

Also showcased were the Newland line of scanners, new printer models from Nanoptix and Custom, and POS solutions for lottery and sports betting.

"The depth and breadth of our product line is unmatched – we can provide every component operators and OEMs need to run their businesses efficiently," added Sigona. "Even more, we continue to deliver value-added innovation that our customers can use to drive demand for their offerings."
